OBJECTIVE

An undergraduate final year engineering fresher seeking an entry-level role to apply foundational knowledge, acquire practical experience, and grow professionally through continuous learning and meaningful contributions.

PROJECTS

Heart Sound Denoising using MATLAB

- Designed and implemented a signal denoising system based on mathematical modeling to separate clean heart sounds from additive noise using time-domain and frequency-domain techniques.
- Applied digital filtering techniques, including bandpass filtering and advanced smoothing methods, to suppress noise while preserving critical signal characteristics.
- Analyzed system performance using quantitative metrics such as Signal-to-Noise Ratio (SNR) and improvement in SNR to measure denoising accuracy.

Smart Fruit Ripeness Detector using IOT

- Developed an IoT-based system to detect natural and artificially ripened fruits through sensor interfacing, calibration, and data interpretation.
- Enabled real-time monitoring and user alerts by integrating the device with a cloud-based mobile application for informed decision-making.

SKILLS

MERN Stack with AI

- Frontend
- Backend
- Database
- Figma

C++

- Loops
- Functions
- Arrays
- Strings
- OOPs
- DSA

MATLAB Simulation

- Data Visualization (Plots, Graphs, Dashboards)
- MATLAB programming (Scripts, functions, debugging)

EDUCATION

Bachelors of Technology

Pursuing

Dr. Babasaheb Ambedkar Technological University, Lonere

- Specialization in Electronics & Telecommunication Engineering

Higher Secondary Certificate (HSC)

June 2021 - Mar 2022

Jagadamba Junior Science College, Yavatmal

- 90.17% (PCM)

ACHIEVEMENTS

- Selected among 30 Sanchaar Mitra nationwide to represent academia at IMC (Indian Mobile Congress) 2024 & ITU-WTSA conference, Ministry of Telecommunications, held at Bharat Mandapam, New Delhi.
